

JAEHYUN HAN

PRODUCT PORTFOLIO · 2026

From field bottlenecks to deployed systems.

User discovery, workflow redesign, and cross-functional
deployment across 30+ markets.

FOR PALANTIR · DEPLOYMENT STRATEGIST

A product manager who deploys systems, not features.

I have built commerce across B2C, B2B2C, and B2B — a global enterprise, a marketplace startup, a solo cross-border store. The work is the same everywhere: find where operations break, build the system that removes the break, stay until it is adopted.

The constraint I keep meeting is legibility. At LG, the data behind each decision sat with other organizations. Working on that class of problem from the outside, with tooling built for it, is why Palantir is my next step.

Bunjang

2026.01 — PRESENT

Product Manager

Cross-border commerce, C2C marketplace.

LG Electronics

2022.11 — 2026.01

Product/Project Manager

Global commerce platforms across 30+ markets.

3 consecutive A ratings, 2023–2025

F&F

2021.01 — 2022.11

Product Manager

0→1 launch of a global store, 12 countries.

BALAN

2019.07 — 2020.02

Merchandiser

Luxury supply across 15 boutique partners.

SIDE PROJECT

ETA Seoul

2024.01 — PRESENT

Solo Side Project

A cross-border store built and operated with AI workflows.

Observe, model, build, deploy, learn.

One loop, run five times in this portfolio. What sits under each step is the artifact I actually produced — not a methodology I subscribe to.

HOW TO READ EVERY CASE IN THIS DECK

OBSERVED → DESIGNED → DEPLOYED → **RESULT**

Each project opens with that four-part strip, then spends its pages on the problem, the decision, and what changed once real users had it. Adoption is reported separately from scale, and coverage separately from attribution.

Five projects, one operating pattern.

Three deep dives carry the argument: the problem, the decision, and the measured result. Two selected deployments show the same method transferring to other markets and business models.

A short appendix holds the full Partner Center survey and the onboarding flow in detail.

DEEP DIVES

01	B2B dealer platform LG Electronics · ERP · 5 markets · 2024–25	p.05–08
02	Cross-border partner platform Bunjang · Marketplace B2B · 2026	p.09–12
03	ETA Seoul Solo cross-border store · 30 brands · 2024–26	p.13–14

SELECTED DEPLOYMENTS

04	Segment multi-store LG Electronics · Federated commerce · 17 markets	p.15–18
05	Invoice automation LG Electronics · Compliance · 30+ markets · 2025	p.19–20

---	--	---------

Digital Transformation for 1,600+ LG Dealers

Built a self-service ordering environment across five markets, connecting stock, contract pricing, credit, and delivery.

AFTER · DEALER PORTAL

Self-service ordering, 24/7 · no
manual desk

PRODUCTION · DEALER ORDERING CART

OBSERVED	DESIGNED	DEPLOYED	RESULT
Email and phone order desk	Self-service ordering portal	5 markets · ERP-OMS	Cancellations 22% → 7%

Orders arrived by email. Stock, price, and credit lived somewhere else.

LG ELECTRONICS · D2X PROGRAM LEAD · 2024.07 – 2025.06 · GERMANY → 5 MARKETS

BRIEF · “DIGITIZE THE OVERSEAS DEALER BUSINESS.” NO SPEC · EVIDENCE · 12 DEALER VISITS, GERMANY 2024

Digitize the order itself. Leave full integration for later.

DECISION PATH · THE BRIEF WAS SUPERSEDED BEFORE ANYTHING WAS BUILT

· ORDER DESK ROLE REDUCED · COMMUNICATION RESCOPED TO BROADCAST · PLATFORM BECAME THE NEW-DEALER CHANNEL

1 Order total with per-SKU amounts 2 Contract price and stock per SKU
 3 Order request submitted from the cart, no sales rep in the loop · production capture

WHY IT WAS FEASIBLE

ALREADY IN ERP · PRICE · TERMS · STOCK · CREDIT

No new integration — the order data existed. It only had to be exposed at the point of ordering.

ROLLOUT ROUTE

DE · MVP 2024.09 → FULL SCALE 2025.01 → TW MY MX ID

Takeaway · The field trip changed the question from faster communication to fewer manual steps.

Cancellations fell to a third. Adoption still lagged.

BEFORE → AFTER · GERMANY PORTAL LAUNCH 2024.09 · ORDER OPS DATA · HOLLOW = BEFORE, FILLED = AFTER

LOGISTICS ECONOMICS

BAR PAIRS SCALED PER ROW · TIER-4 DEALERS MOVED UP +23% IN THE FIRST QUARTER

Figure 2. Truck load and shipping cost, before and after launch.

HELD

Once container volume was visible in the cart, dealers filled trucks on their own; shipping cost per order fell 23%.

WHAT REMAINED UNRESOLVED

My six-month post-launch estimate: roughly half the dealers still ran spreadsheets in parallel. Build is not adoption; I had undervalued enablement.

NEXT

5 markets launched; 10-market expansion approved. The next platform (Project 02) moved onboarding into design from day one.

LG INNOVATION AWARD 2025 LG ELECTRONICS 2ND · LG GROUP FINALS 2ND

Takeaway · The numbers held. Adoption did not follow by itself, and that lesson shipped into the next build.

Cross-border Partner Platform

Turning chat and Excel operations into an order-centric B2B workspace.

CHAT + EXCEL

→ SHARED ORDER OBJECT

→ PARTNER WORKSPACE

OBSERVED	DESIGNED	DEPLOYED	RESULT
Chat threads and Excel ops	Status-based order workspace	Phase 1 · 30 partners	88.8% of outbound sales

ORDER OPERATIONS: 14 STATES, SEARCH, GMV AND ORDER STRIP

C2C chat is not a B2B workspace. Ops ran on Excel.

BUNJANG · PRODUCT MANAGER · 2026.01 – PRESENT · RAPID YOY CHANNEL GROWTH

THE CHANNEL

Rapid YoY growth on chat accounts + Excel

Proxy-purchase volume outgrew its tooling. No squad, no mandate, and no owner for the workflow.

THE EVIDENCE

10+ partner interviews · 2025.12 workflow audit

Every partner described the same loop: find the order in a chat thread, re-key it into a workbook, reconcile by hand.

WHY IT MATTERED

Each re-entry is an unlogged decision. With nothing to search, assign, or settle against, ops capacity — not demand — capped the channel.

Patch the chat, script the spreadsheets, or build the platform.

OPTION A

~~REJECTED · SYMPTOM FIX~~

Improve the chat tool

Faster triage inside chat. Search, settlement, and API control stay manual.

OPTION B

~~REJECTED · NO SCALE~~

Automate the spreadsheets

Scripts over the workbooks. Fast to ship, collapses again at partner scale.

OPTION C

SELECTED

Dedicated partner platform

Order-centric workspace: search, alerts, settlement, API keys, role-based approvals. Needed a squad that did not exist.

AS-IS · CHAT AND EXCEL OPERATIONS

TO-BE · PARTNER PLATFORM

SAME WORK, ONE RECORD · EXPLANATORY DIAGRAM

Figure 2. Operations before and after: four disconnected surfaces became one order record. The same work, re-anchored on a searchable order object instead of chat threads and workbooks.

THE ARTIFACT

16.5K LOC · LINE-BY-LINE WALKABLE

A walkable prototype of the whole workflow replaced a spec no one would read.

THE ALIGNMENT

12-PERSON DELIVERY SQUAD

No authority was granted. The artifact was what a squad agreed to build.

Takeaway · Authority was never granted. A working artifact aligned a 12-person delivery squad.

Active partners represented 88.8% of June outbound sales.

Global Partner Center

Order Management

1 Status-based order processing – 14 states as workable queues, searchable by order no., UID, invoice or assignee

2 Order-linked support and settlement on the same record, replacing separate chat threads

Production capture, sample data · English UI

Order No.	Order Date	LT	Shop Name	Seller UID	Product ID	Total
1878512064	2025-02-10 16:05		빈티지주류	2000002836	69439579	50,000₩
1878512064	2025-02-10 16:05		jennie	2000002836	69439579	75,000₩
1878512064	2025-02-10 16:05		월드세일스토어	2000002836	69439579	65,000₩

WHY THEY USED IT

“We can see order status and required actions at a glance, so we process more volume with fewer misses.”

PARTNER A · JUNE 2026

STILL OPEN

Internal turnaround improved by roughly half on the ops team's own pre/post estimate — directional, not a measured KPI. Cancellation and reply-time targets are set; the window is still open.

Data as of June 2026. Active means recorded login activity in June. KRW 763M and 88.8% are the June outbound sales represented by those partners — coverage, not attribution. Survey detail in the appendix.

PROJECT 03 · SOLO CROSS-BORDER COMMERCE

One Operator, Thirty Brands, Every Recurring Task a System.

Manual operations in 2024, a developer-assisted rebuild in 2025, and a systemized solo operating model in 2026.

2024 MANUAL — 2025 DEVELOPER-ASSISTED — 2026 SYSTEMIZED

OBSERVED	DESIGNED	DEPLOYED	RESULT
Every task done by hand	Recurring decisions as loops	30 brands · 307 orders	\$41K cumulative GMV

MANUAL OPERATIONS · DEVELOPER-ASSISTED BUILD · AUTOMATED DECISION LOOPS

PRODUCTION · ETA SEOUL STOREFRONT AND CHECKOUT · SHOPIFY

A solo business forced every recurring task to become a system.

OPERATING MODEL · ONE CONTINUOUS TRACK, ONE OPERATOR

LOOP RUNS ON SCHEDULE · RESULT LOGGED BACK INTO THE LEDGER

RECURRING DECISIONS RANKED IN A TASK LEDGER, THEN PRODUCTIZED AS LOOPS · ONE LOOP IN BUILD, NOT A FINISHED SYSTEM

MULTI-LLM · PLAYWRIGHT · SHOPIFY GRAPHQL · PREFECT · 4-STAGE DEPLOY GATE

The 2025 rebuild optimized the architecture before the live catalog was understood; the crawler broke on a catalog reality the schema did not anticipate. The store returned to one operator in 2026.

GMV BY YEAR

SHOPIFY · USD · 2026 H1 · OUTCOME CONTEXT

Takeaway · Deploy first, productize what survives. The clean architecture came second.

Commerce Infrastructure for a New SMB Segment

Built a shared-core, local-extension environment to launch SMB commerce across 17 markets without disrupting open B2C promotions.

OBSERVED	DESIGNED	DEPLOYED	RESULT
Averaged storefront metrics	Shared core, local extensions	17 markets	12.5% of storefront revenue

B2B2C · SEGMENTATION · LOCAL EXTENSIONS

The average looked fine. A missing segment was invisible inside it.

LG ELECTRONICS · D2X PROGRAM · 2024.03 – 2025.02 · 17 MARKETS

THE SIGNAL

SMB CHANNEL REVENUE · 0%

Bulk and refund workflows remained manual. Local requirements showed real SMB demand the storefront could not serve.

THE CONSTRAINT

OPEN PROMOS VS RETAIL PARTNERS

Open B2C promotions conflicted with retail partners such as Amazon and Best Buy. SMB pricing needed a closed, certified space, not a banner.

One shared core. Local exceptions became plugins, not forks.

OPTION A	Separate SMB sites per country	Full local freedom, seventeen forks to maintain. Every fix ships seventeen times.	REJECTED · 17 FORKS
OPTION B	Force one global standard	One codebase, no exceptions. Tax, certification, and invoice rules genuinely diverge by country.	REJECTED · RULES DIVERGE
OPTION C	Shared core + country plugins	Certification, tax refund, and bulk flows as country extensions under global guardrails.	SELECTED

17
MARKETS

ONE SHARED CORE
maintained once

LOCAL EXCEPTIONS AS
PLUGINS
not forks

Takeaway · Ranked by impact times feasibility: one core to maintain, local rules where they genuinely diverge.

A segment the average said did not exist reached 12.5% of revenue.

01

Held

The closed, certified space separated SMB pricing from open B2C promotions, resolving the retail-channel conflict.

02

Guardrail

The global discount cap caught pricing mistakes live, cutting price errors from 8.2% to 2.4%.

03

Next

The shared-core-plus-extensions pattern was reused for invoice automation (p.17).

Takeaway · Segmentation was an architecture decision, not a marketing tactic.

One Invoice Core. Local Tax Rules as Extensions.

Mapped ERP and OMS fields into a shared core with market-specific tax modules.

OBSERVED	DESIGNED	DEPLOYED	RESULT
33 manual tickets a month	One agreed field dictionary	30+ markets · ERP-OMS	Zero manual requests

WORKFLOW AUTOMATION · FIELD DICTIONARY · LOCAL COMPLIANCE

SHARED INVOICE CORE		REQUIRED IN EVERY MARKET	
BUYER identity	AMOUNTS net · tax · total	BUSINESS ID registration	TAX BASE taxable amount
COUNTRY	EXTENSIONS · EXAMPLES	MAPPED PER MARKET	
BR	CA	EU	
NOTA FISCAL e-invoice · local filing	GST + QST dual tax · EN/FR invoice	VAT zero-rate · exemptions	

EXPLANATORY SCHEMA · PRODUCTION ERP-OMS MAPPING IS INTERNAL

Manual invoice requests, 33 per month, went to zero.

PROBLEM

Business invoices ran on manual ERP requests: 33 tickets, roughly 21 MD, every month. Each market's tax rules lived in people's heads, not the system.

APPROACH

Documented mandatory market fields once, then split the schema into a shared core plus country-specific extensions. A new market became a mapping, not a project.

LOAD IT ABSORBED

The same workflows carried a 221% increase in invoice volume across 12 countries, with no added headcount and no return to the twice-daily manual overload.

MAPPING PIPELINE · ONE FIELD DICTIONARY APPLIED END TO END

buyer · business id amounts · tax base rate · legal format

ERP
billing source record

OMS
order state, amounts

TAX RULE
market module applied

INVOICE
issued and filed locally

WHAT THE PIPELINE REPLACED MEASURED AFTER ROLLOUT

33 → 0
MANUAL REQUESTS / MONTH
nobody files a ticket to get an invoice any more
PIPELINE OUTPUT · INTERNAL OPS TICKET LOG, 2025

~21 MD
MONTHLY EFFORT REMOVED
about one person-month back, every month

1
FIELD DICTIONARY, AGREED ONCE
a new market is a mapping

FIELD DICTIONARY · SHARED CORE TO COUNTRY EXTENSION			EXPLANATORY · EXAMPLES · PRODUCTION MAPPING IS INTERNAL		
FIELD	IN SHARED CORE		COUNTRY EXTENSION		
BUYER	Name, address, business contact		CA · EN/FR invoice rendering		
AMOUNTS	Net, tax, total		—		
BUSINESS ID	Registration number		Per-country ID format rules		
TAX BASE	Taxable amount and rate		BR · Nota Fiscal · CA · GST + QST · EU · VAT zero-rate		

Takeaway · The hard part was not the build. It was making tax, ERP, and dev agree on one field dictionary.

Operator empathy, with enough technical fluency to get from ambiguity to adoption.

Field discovery

10+ partner interviews · dealer field visits in Germany
Pain-point and exception mapping before any spec

Workflow and data reasoning

Order states, handoffs, business rules, ERP–OMS relationships
SQL analysis to find the segment an average had hidden

Cross-functional delivery

A 12-person squad aligned by a walkable artifact, not authority
Engineering, ops, sales, finance, subsidiaries, external partners

Adoption and iteration

Usage review, operator training, qualitative feedback
Reporting coverage separately from attribution

PROOF

An A performance rating three consecutive years

LG ELECTRONICS · 2023–2025

LG Innovation Award, 2nd place at company and group final

LG ELECTRONICS · 2025

I turn ambiguous operations into systems people use.

I am most effective when the problem is not yet defined, the workflow crosses organizational boundaries, and the impact depends on whether real operators adopt it.

JAEHYUN HAN

SEOUL, SOUTH KOREA

EMAIL

LINKEDIN

What partners named as the most valuable part of the platform.

Kept out of the main deck deliberately: with 18 selected responses, the percentages are too thin to carry an argument. The ranking is what matters — order management was both the top pain point and the top satisfaction driver.

Respondents selected the single most valuable point. Percentages are of 18 selected responses, not of all onboarded partners.

IN PARTNERS' WORDS

“We can see order status and required actions at a glance, so we process more volume with fewer misses.”

PARTNER A

“Support questions used to sit in a chat thread away from the order. Now the answer lives on the order.”

PARTNER B

NEXT TWO PRIORITIES, FROM THE SAME SURVEY

Staging API and webhook access

partners want to test integrations before production

Automated virtual-account issuance

the last settlement step still done by hand

Full feature-request log and interview schedule available on request.

Five manual handoffs became one approval.

Every step before the platform was a person waiting on another person's email. The redesign kept the same policy checks but moved them behind a single approval in the partner center, so account creation and the onboarding guide fire automatically.

BEFORE · FIVE HANDOFFS, EACH ONE MANUAL

Each form was re-keyed by a different team. Nothing was traceable, and the partner's first week was spent waiting.

AFTER · ONE APPROVAL, TWO AUTOMATED OUTPUTS

The same policy checks now sit inside the approval step, with a role-based audit trail behind it.

WHAT THIS PROVES

The platform's value to partners was not a new dashboard. It was the removal of coordination work — the same reason order status and support were pulled onto one record.
